Saint Lucia

Press Statement – WHO

Members of the WHO have been meeting to discuss how better to deal with future pandemics, and held their first round of talks on February 24th of this year.

In December 2021, the World Health Assembly decided to start a global process to draft a pandemic treaty. Article 19 of the Constitution of the WHO gives the body the authority to adopt conventions or agreements on matters of health. A two-thirds majority is needed to adopt such conventions or agreements. The first draft of this treaty will be presented on August 1st.

This is an extremely concerning development that will affect every human on the planet as it will give this un-democratically elected body the power to mandate and institute regulations, such as lock-downs and vaccinations, over all 194 sovereign nations of the world.

After observing how poorly the response has been by these health authorities who have been constantly shifting the goal posts and the narrative to suite their agenda, it is frightening to consider how much power these people will have over our lives and bodily autonomy in the future.

Our individual freedoms are at stake. Now Dr. Bill Gates is suggesting a shot every six months. Where will this end? The NGP is bringing this serious development to the people of Saint Lucia and is urging the CMO, the MOH, the Medical and Dental Association, the Minister of Health, and the PM to take this potentially dangerous development seriously and to consider the upcoming vote on this important issue.

This is a wake-up call to all Saint Lucians. Please investigate for yourselves – all of our livelihoods are on the line.
